

Control and optimization

Session organizers

1. Pablo A. Lotito, Universidad Nacional del Centro de la Provincia de Buenos Aires, Tandil, Argentina.
2. Lisandro Parente, Universidad Nacional de Rosario, Rosario, Argentina.

Description

This session includes numerical methods applied to optimization, control and optimal control. A non exhaustive list of topics is: linear and nonlinear optimization, min-max type problems, numerical solution of HJB equations, optimal control problems with singular arcs; optimal control of real-time systems, decomposition methods for large problems size, heuristics for optimum control of real-time systems.
